An effective vehicle and equipment maintenance tool designed specifically for the management and accounting needs of cities, counties, utilities, and other public sector agencies.

Vehicle Maintenance Features

- ✓ Supports multiple departments and fleets
- ✓ Detailed vehicle and equipment inventory
- ✓ Assignment of vehicles to personnel
- ✓ On-line entry of all charges and expenses
- ✓ Comprehensive cost analysis tools
- ✓ Preventive Maintenance scheduling
- ✓ Fuel and fluids management tools
- ✓ Interfaces to automatic fuel and fluids dispensing equipment
- ✓ Automatically allocate vehicle and equipment expenses to job work orders
- ✓ Generate and print inspection and repair orders

Highlights

- ✓ Generates all related accounting entries
- ✓ Period end processing features
- ✓ Easy re-numbering of vehicles and equipment
- ✓ Parameter-driven design
- ✓ User defined reporting
- ✓ LGDPC Calendar Interface
- ✓ Fully integrated with other System Z systems

Interfaces

- ✓ System Z Accounts Payable
- ✓ System Z General Ledger
- ✓ System Z Inventory Control
- ✓ System Z Payroll and Personnel
- ✓ System Z Work Orders

Selected Features

User defined transaction codes

*Interfaces with the System Z
Accounts Payable System*

*Repair and maintenance service
management*

*Interfaces to LGDPC's Inventory
Control System*

*Allocates vehicle and equipment
costs*

Demonstrated Benefits

Account for an unlimited variety of charges including labor, parts, insurance, depreciation, licenses, fees, and other miscellaneous expenses.

Purchases of parts, outside service charges, and other miscellaneous costs can be directly imported from the System Z Accounts Payable System. This eliminates redundant data entry. All resulting accounting entries can be generated and automatically posted to the appropriate General Ledger accounts.

Provides tools to manage repair and maintenance service for all vehicles and equipment. Preventive Maintenance scheduling can be based on date, odometer readings, or hours of use. Tracks maintenance resulting from wear, breakdowns and defects. Mechanics can create, use, and adjust detailed inspection and work orders. All repair orders can be printed on-line as needed. A comprehensive selection of reporting and on-line inquiry facilities enhance management's ability to improve maintenance, reduce equipment downtime, and minimize costly unscheduled downtime that often results from improper maintenance.

An interface to the Inventory Control System permits available parts to be posted directly to repair orders. The standard labor information associated with each part is used to fine tune repair labor estimates.

The system can be used to allocate vehicle and construction equipment costs directly to job work orders. Vehicle and equipment usage for a specific work order, in terms of miles or hours of use, can be entered via the Vehicle Maintenance System as well as System Z's Payroll and Work Order Management Systems. All vehicle usage and expenses are automatically passed to the Work Order Management System where costs are spread and allocated based on percentages of usage.
